PROFILE

Mechanical Engineer specialising in bespoke machinery, multi-axis automation, and mechanical system optimisation. Proven ability to deliver comprehensive engineering solutions, Design for Manufacture (DfM), Project Lifecycle Management, encompassing CAD design, technical calculations, and successful on-site installation and commissioning. **Now fully available for full-time employment, with only the final dissertation submission remaining for my MSc in Engineering Management.** Eligible to work in the UK without sponsorship and open to relocation.

EDUCATION

MSc Engineering Management, Cardiff University 2025 – Current (in dissertation term)

Dissertation: Life Cycle Analysis of a Circular Manufacturing Process Chain: My MSc dissertation investigates the environmental sustainability of a new circular manufacturing process that converts metal production scrap into high-quality additive manufacturing (AM) powders. By applying Life Cycle Analysis (LCA), the research maps the entire process chain, from scrap collection to powder production and reuse. This allows me to measure key environmental factors, such as energy consumption, carbon emissions, and material efficiency. Ultimately, the project compares this circular approach with traditional, resource heavy production methods to identify the main sustainability benefits and opportunities for optimisation within the circular economy.

- **Making and Checking (72%):** Acquired practical knowledge of Renishaw CMM and Renishaw Equator machines. Developed skills in analysing dimensional data and gained a strong understanding of Reliability Engineering processes.
- **Management Skills for Engineering (72%):** Studied Supply Chain and Operations Management, as well as Marketing environments specifically for engineers.
- **Being Sustainable Solutions (69%):** Engineering approaches to climate change, resource scarcity, and sustainability-driven decision-making.
- **Leadership, strategy and innovation (66%):** Developed advanced capabilities in authentic leadership, strategic planning, innovation management, and organisational change, with a strong focus on sustainability, stakeholder engagement, and engineering-driven process improvement.

BSc Mechanical Engineering, Cukurova University, Türkiye September 2016 – March 2022 (Cumulative Grade Point Average: 2.32/4)

- **Relevant Modules:** Engineering, manufacturing and construction, mechanics, motor vehicle and aircraft engineering.
- **Thesis:** Focused on the development of a five-axis 3D printer, including the successful manufacture of a prototype.
- **Achievement:** Completed engineering education in English, studying under highly qualified professors.

Associate Degree in Mechanical Drawing, Dokuz Eylul University, Türkiye September 2012 – September 2015 (Cumulative Grade Point Average: 2.57/4)

Possesses a strong practical foundation built through a comprehensive associate degree in Machine Drawing and Construction. The rigorous, two-year programme seamlessly integrated mechanical theory with hands-on workshop experience, focusing heavily on Computer-Aided Design (CAD), material science, and advanced manufacturing processes. Designed to bridge the gap between technical drafting and physical production, the curriculum provided practical expertise in industrial tooling, machine elements, and quality control. This training was further solidified by a 40-day industrial internship, developing a deep understanding of how to translate complex technical specifications into highly manufacturable solutions.

High School Diploma (Industrial Moulding), Atatürk Anatolian Tech, Türkiye 2008 – 2012

An industrial mould maker designs and builds the moulds needed to mass-produce metal and non-metal parts. Their work involves analysing project plans, creating technical drawings, and using machinery like lathes and drills to construct precise, high-quality moulds. This practical job requires excellent hand-eye coordination, spatial awareness, and attention to detail.

RELEVANT EXPERIENCE

Product Design Engineer, Yıldız Endüstri, İzmir, Türkiye February 2024 – December 2024

- **Technical Implementation:** Led a 3-week on-site installation for a UK-based firm, resolving technical design conflicts and ensuring project delivery 10% ahead of schedule.
- **Design Optimization:** Conducted technical site evaluations at active plants to refine final product layouts, directly improving manufacturing output and spatial efficiency.
- **Engineering Oversight:** Analysed manufacturing field reports to drive quality assurance and provided technical guidance to production teams to ensure strict alignment with design specifications.
- **Industry Engagement:** Represented the company at major international trade shows, including the Waste Management Expo (Russia) and Waste & Recycling Expo (UK), to identify emerging industrial technologies.

Junior Product Design Engineer, BSK Global, İzmir, Türkiye April 2022 – January 2024

- **System Design:** Engineered bucket elevators and conveyor systems using SolidWorks PDM, performing complex calculations to select appropriate electric motors and gear reducers tailored to project loads.
- **International Project Lead:** Served as Lead Designer for a cement conveying system facility in Mexico, managing the project from initial layout through to the generation of detailed Bills of Materials (BOM).
- **ERP & Data Management:** Developed IFS (ERP) for precise project tracking and documentation, ensuring seamless integration between design data and procurement.
- **Site Engineering:** Executed detailed site investigations to revise and finalize plant layouts, confirming structural and mechanical compatibility with existing facilities.

Internship & Technical Draftsman, Ar Endüstri, İzmir, Türkiye June 2014 – October 2016

- **Regulatory Compliance:** Redesigned forklift and backhoe loader components to meet strict ATEX standards, safeguarding safety compliance for hazardous environments.
- **Mechanical Systems:** Gained practical expertise in the mechanical design of heavy equipment, collaborating with international engineering teams to interpret and implement multilingual design requirements.

OTHER EXPERIENCE

Usher Volunteering, Sherman Theatre, Cardiff February 2024 – Current

- Engaging with the public and adapting to the local work environment.

RELEVANT SKILLS

- **CAD & Simulation:** SolidWorks (CSWA, CSWP, Sheet Metal, Weldments), AutoCAD, NX, CATIA, Ansys.
- **Manufacturing & Engineering Tools:** SolidWorks PDM, IFS ERP, GD&T fundamentals, G-Code interpretation, CMM/Equator familiarity.
- **Engineering Competencies:** Mechanical design, system optimisation, installation & commissioning, technical problem-solving, layout design, ATEX-related redesign.
- **Languages:** English (professional proficiency), Turkish (native).
